## **SENIOR MECHANICAL/ELECTRICAL/PLUMBING/ ENGINEER**

Join the most fun engineering team in New Hampshire! Team Engineering seeks a driven, enthusiastic engineer to join our growing, fast-moving organization. We continually strive to be an exceptional one-stop-shop for building design and engineering services in New England. We design a wide variety of buildings and systems, both commercial and residential. The perfect candidate has strong engineering production experience and is ready to leap into a leadership role.

### **Team Engineering's Core Values:**

- ✓ We passionately serve our clients
- ✓ We strive to deliver excellence
- ✓ We embrace responsiveness, efficiency, and collaboration
- ✓ We give to our community
- ✓ We value teamwork, innovation, and continuous improvement
- ✓ We seek a fair profit/price
- ✓ We value family and fun

### **Requirements:**

- Professional Engineer in New Hampshire, with reciprocity available throughout Northeast.
- 5+ years of full-time professional experience in building MEP design, with exposure to other building engineering and science disciplines (e.g. architecture, envelope, structural) a plus. Experience should include new building design and existing system analysis/modification. We are building renovation experts.
- Intimate knowledge relevant building codes and standards for all building system design and components including ASHRAE standards, the IBC, IMC, and various NFPA codes.
- Proficient with HVAC, plumbing, and electrical design software.
- Experience with a variety of load calculations including electrical load calculations, heat loss and heat gain calculations, and duct/pipe friction loss calculations.
- Experience using and modeling building systems in Revit.

### **Responsibilities:**

- Project and client manager. We work for architects, design-build contractors, property managers, building/homeowners, and associations.
- Perform quality assurance on calculations and plans. Act as the engineer of record on the majority of our MEP design projects.
- Lead efforts to continuously develop and improve internal design techniques, approaches, and procedures. This includes managing and selecting design software, calculation methods, and approaches to design challenges.
- Assist with production of full mechanical, electrical and plumbing drawings using Revit.
- Coach and manage our production engineers performing design and analysis. Coach and inspire younger staff to develop. Manage company workload for all MEP projects.

- Perform feasibility studies and consultations with written reports. Help building owners understand their buildings, and the opportunity to improve existing systems.
- Solicit new clients, develop business, and prepare proposals. Network with colleagues through professional and technical societies.
- Engage directly with clients, contractors, and industry colleagues.
- Collaborate with interdisciplinary design team including other engineers, architects, owners, contractors, and other invested parties.

Team Engineering offers great benefits such as health, dental and disability insurances, retirement savings, education and training reimbursement, quarterly Team Fun Days, paid holidays, and profit sharing.
